

## How to make an easy 6-page booklet (plus bonus middle flip-up page!)

### Materials needed:

- 1 sheet - 8.5 x 11 printer paper
- A pair of scissors
- Ruler or spoon for creasing (optional)

### Step 1:

Orient your piece of paper as landscape (wide rectangle) facing you on a table/flat surface

### Step 2a:

Fold the paper in half by taking the left edge of the paper over to meet the right side - (hamburger" or "taco" style).

**Step 2b:** Using your finger, ruler or spoon flatten down that center fold along the top. Now you have a folded a simple pamphlet/ "taco" -->

**Step 3a:** From the top edge of the "taco", fold down in half to meet the bottom edge of the paper.

**Step 3b:** Flatten down and crease that fold with a ruler, finger or spoon. It should be a smaller rectangle size ->

**Step 4:** Open that top flap from the crease you just flattened.

**Step 5:** Flip over the paper so you have a "tent" with a mountain fold on top (popping up towards you).

**Step 6:** With scissors, cut along the mountain crease only on the top folded section- (see dotted lines in photo) -->

**Step 7:** Fold down so that the top edge meets the bottom edge.

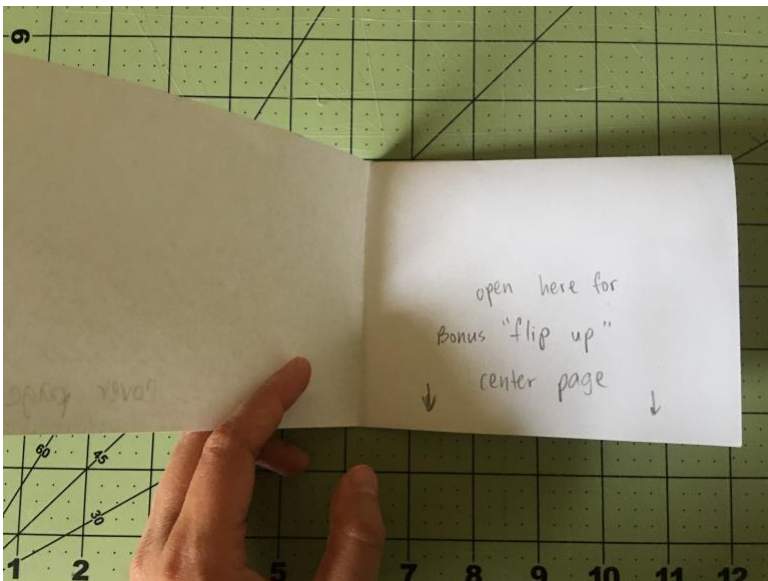

The slit you had cut from before should facing up/ on the top.

**Voila!**

Now you have a 6-page booklet...

...with a bonus middle flip-up page (or you can tape/glue that down, if desired).
